

ADVANCED PERIMETER SYSTEMS

SOLAR POWERED SOLUTIONS

Advanced Perimeter Systems' highly effective perimeter security solutions can all be powered using solar, meaning you get all the benefits of the security system without the cost of electricity. Security might not be the first thing that comes to mind when thinking about aspects of your company that could go green.

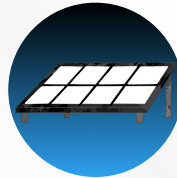

EMBRACE THE POWER OF SOLAR

COST EFFECTIVE

Digging ducting and laying cables can be costly if you have a large site. Solar powered solutions prevent the need for any ducting, saving you thousands.

SUSTAINABLE CHOICE

Promote the use of clean solar power energy and contribute to environmental conservation. This aligns with corporate social responsibility initiatives and sustainability commitments.

BACK-UP POWER

Depending on your site location and environmental conditions, we can provide a range of backup power solutions, including generators and battery storage. For sites operating in harsh or remote environments, where periods of limited or no sunlight can last for several days, we develop bespoke power solutions designed to ensure reliable and uninterrupted operation.

RELIABLE SECURITY

Enjoy continuous operation even during power outages, ensuring your security is never compromised. We have designed our solar powered solutions to work all year round, even in Scotland!

WE CARE ABOUT YOUR SECURITY

- Get in touch to discover how a solar-powered solution can meet your environmental requirements while maintaining reliable, uninterrupted security.
- Easy integration - integration can be done with any systems that can accept dry relay contacts
